

Es6 lab day 2

- 1) Swap the values of two variables using destructuring
- 2) Using rest parameter and spread operator return max value from any array

note: array length is not fixed return min and max value and display each of them separately after function call

Promises

- a. Make your own interface to create tabs and display usernames by requesting users from the link below using Ajax ES6 fetch function:

<https://jsonplaceholder.typicode.com/users>

Note: handle the response with promises using then and catch methods.

- b. When a user tab is clicked display its posts' titles by requesting the posts from the link below using Ajax ES6 fetch function:

<https://jsonplaceholder.typicode.com/posts?userId=userId>

Note:

- handle the response with promises using Async and await.
- do not get the posts of all users on page load, the user tab must be clicked to request its posts.
